

TAVR Imaging Assessment Guideline

April 2017

Pre-Procedure Imaging

Region of Interest	Recommended Approach and Key Measures	Additional Comments
Aortic Valve Morphology	<ul style="list-style-type: none">• Transthoracic Echo (TTE)<ul style="list-style-type: none">▪ Tri-leaflet, bicuspid or unicuspid▪ Valve calcification▪ Leaflet motion▪ Annular size and shape	<ul style="list-style-type: none">• Transesophageal Echo (TEE) if can be safely performed, particularly useful for sub-aortic membranes• Cardiac MRI if echocardiography is non-diagnostic• ECG-gated thoracic CTA if MRI is contraindicated
Aortic Valve Function	<ul style="list-style-type: none">• Transthoracic Echo (TTE)<ul style="list-style-type: none">▪ Maximum aortic velocity▪ Mean AV gradient▪ AVA▪ Stroke volume index▪ Presence and severity of AR	<ul style="list-style-type: none">• Additional Parameters<ul style="list-style-type: none">▪ Dimensionless index▪ AVA by planimetry (echocardiography, CT, MRI)▪ Dobutamine stress echo for LFLG AS-reduced EF▪ Aortic valve calcium score if LFLG AS diagnosis in question
LV Geometry and Other Cardiac Findings	<ul style="list-style-type: none">• Transthoracic Echo (TTE)<ul style="list-style-type: none">▪ LVEF, regional wall motion▪ Hypertrophy, diastolic FX▪ Pulmonary pressure estimate▪ Mitral valve (MR, MS, MAC)▪ Aortic sinus anatomy and size	<ul style="list-style-type: none">• CMR: Identification of cardiomyopathies• Myocardial ischemia and scar: CMR, PET, DSE, thallium• CMR imaging for myocardial fibrosis and scar

Annular Sizing	TAVR CTA-gated contrast-enhanced CT thorax with multiple acquisitions. Typically reconstructed in systole 30 - 40% of the R-R window.	<ul style="list-style-type: none"> Major/minor annulus dimension Major/minor average Annular area Circumference/perimeter
Aortic Root Measurements	Gated contrast-enhanced CT thorax with multiphase acquisition. Typically reconstructed in diastole 60 - 80%.	<ul style="list-style-type: none"> Coronary ostia heights Mid-sinus of valsalva (sinus to commissure, sinus to sinus) Sino-tubular junction Ascending aorta (40 cm above valve plane, widest dimension, at level of PA) Aortic root and ascending aorta calcification For additional measurement, see "Checklist for Pre-TAVR Patient Selection and Evaluation"
Coronary Disease and Thoracic Anatomy	<ul style="list-style-type: none"> Coronary angiography Non-gated thoracic CTA 	<ul style="list-style-type: none"> Coronary artery disease severity Bypass grafts: Number/location RV to chest wall distance Aorta to chest wall relationship
Non-Cardiac Imaging	<ul style="list-style-type: none"> Carotid ultrasound Cerebrovascular MRI 	May be considered depending on clinical history

Vascular Access Recommendations (Imaging Dependent on Renal Function)

Region of Interest	Recommended Approach	Key Parameters
Normal Renal Function (GFR >60) or ESRD Not Expected to Recover	TAVR CTA	<ul style="list-style-type: none"> Aorta, great vessel, and abdominal aorta Dissection, atheroma, stenosis, calcification Iliac/subclavian/femoral luminal dimensions,

		calcification, and tortuosity
Borderline Renal Function	<ul style="list-style-type: none"> • Contrast MRA • Direct femoral angiography (low contrast) 	<ul style="list-style-type: none"> • Institutional dependent protocols • Luminal dimensions and tortuosity of peripheral vasculature
Acute Kidney Injury or ESRD with Expected Recovery	<ul style="list-style-type: none"> • Non-contrast CT of chest, abdomen and pelvis • Non-contrast MRA • Can consider TEE if balancing risks/benefits 	Degree of calcification and tortuosity of peripheral vasculature

Peri-Procedural Imaging

Imaging Goals	Recommended Approach	Additional Details
Interventional Planning	TAVR CTA	Predict optimal fluoroscopy angles for valve deployment
Confirmation of Annular Sizing	Pre-procedure MDCT	<ul style="list-style-type: none"> • Consider contrast aortic root injection if needed • 3D TEE to confirm annular size
Valve Placement	Fluoroscopy under general anesthesia	TEE (if using general anesthesia)
Paravalvular Leak	Direct aortic root angiography	TEE (if using general anesthesia)
Procedural Complications	<ul style="list-style-type: none"> • Transthoracic Echo (TTE) • TEE (if using general anesthesia) • Intra-cardiac echocardiography 	See treatment options in “TAVR Procedural Complications and Management”

Long-Term Post Procedural Imaging

Evaluate Valve Function	Transthoracic Echo (See “Post TAVR Checklist” for Frequency)	<ul style="list-style-type: none"> • Key elements of echocardiography <ul style="list-style-type: none"> ▪ Maximum aortic velocity ▪ Mean aortic valve gradient ▪ Aortic valve area ▪ Paravalvular and valvular AR
LV Geometry and Other Cardiac Findings	<ul style="list-style-type: none"> • Transthoracic Echo (TTE) <ul style="list-style-type: none"> ▪ LVEF, regional wall motion ▪ Hypertrophy, diastolic function ▪ Pulmonary pressure estimate ▪ Mitral valve (MR, MS, MAC) 	

2017 ACC Expert Consensus Decision Pathway for Transcatheter Aortic Valve Replacement in the Management of Adults With Aortic Stenosis A Report of the American College of Cardiology Task Force on Clinical Expert Consensus Documents Catherine M. Otto, MD, FACC, Co-Chair; Dharam J. Kumbhani, MD, SM, FACC, Co-Chair; Karen P. Alexander, MD, FACC; John H. Calhoon, MD, FACC; Milind Y. Desai, MD, FACC; Sanjay Kaul, MD, FACC; James C. Lee, MD; Carlos E. Ruiz, MD, PHD, FACC; Christina M. Vassileva, MD, FACC
